PASSION

ROPS

An approved front folding ROPS allows this tractor to comfortably work in greenhouse tunnels, canopy-style orchards and vineyards and dense foliage crops, while ensuring maximum operator safety.

+ ENGINES

The 9600 tractor range features a choice of two 3.3L turbo intercooler Cummins engines, both meeting the **Tier 3** emission standards. One delivers a power output of **85 hp at 2200 rpm** and a torque of **304 Nm** which remains virtually constant between **1400 and 1600 rpm**, while the other provides **99 hp at 2200 rpm** with **415 Nm** torque remaining virtually constant between **1400 and 1600 rpm**, thanks also to the electronically-controlled injection system.

CHASSIS

The chassis with $\pm 15^\circ$ axle oscillation provides maximum traction on all terrains, while keeping a low centre of gravity for optimum stability of the tractor/implement combination and increased safety on slopes.

STEERING SYSTEM

The steering system with twin cylinder and tie rod integrated into the top of the axle is simple and effective, including when large-section tires are used.

+ TRANSMISSION

This is the **only** equal-wheeled tractor that features a transmission with 16 forward and 16 reverse speeds (4 ranges with 4 speeds in each range), combined with an **electrohydraulically-controlled reverse power shuttle**. This device allows the operator to shift from forward to reverse without using the clutch pedal, making the 9600 tractor ideal for front loader operations. The transmission provides a maximum speed of 40 km/h and all speeds can be selected in a logical sequence ensuring the operator has the right speed whatever the job and the ground conditions.

DRIVING POSITION

The driving position is mounted on a platform suspended on silent-blocks and perfectly sealed to provide the operator with a clean and quiet driving space. Connections between platform and chassis are designed to allow for quick removal of the platform, making supplementary maintenance works easier. All controls are ergonomically arranged and the driving position with turntable is easily reversed in just a few seconds.

+ BRAKES

The **internal wet multi-disc brakes** deliver superior braking performance in any condition with no need for maintenance or adjustment. This braking system increases considerably the active safety of the vehicle, making it ideal for work on sloping terrain and transport operations, or in any situation requiring the use of the steering brakes.

VALPADANA

ORIGINAL PASSION

PASSIVE SAFETY

In full compliance with current regulations on work safety, the 9600 series tractors provide a comfortable and safe driving position.

ACTIVE SAFETY

The powerful braking system and improved axle oscillation combine with excellent traction and unequalled stability on all terrains, maximizing the active safety of the tractor.

+ VISIBILITY

The compact and clean design of the tractor offers the operator **360-degree all-round visibility**.

TRACTION

The electrohydraulic control of the four-wheel drive (only on ISR-ARR versions) and differential locks provides perfect grip and maximum traction in any condition.

+ POWER TAKE-OFF

The **540/750 rpm and ground speed PTO is fully independent and engageable via a wet multi-disc clutch**. This system enables the PTO shaft to rotate independently of the transmission thanks to a clutch and a dedicated control device. This allows the operator to start or stop the rotation of the PTO shaft while the tractor is moving or to keep the implement rotation constant while changing gears or operating the clutch pedal when starting or stopping the vehicle.

+ POWER LIFT

The power lift is equipped as standard with raise/lower/float functions and lowering speed adjustment. A draft, position and intermix control is also available as an option. The lift features doubly-adjustable or fixed telescopic lifting bars and a cat. 2 three-point hitch that provides a **maximum lift capacity of 2300 kg at ball joints**.

The 9600 tractors complete the Valpadana range of super specialised, compact equal-wheeled tractors in the 70 to 100 hp power segment. Offered in a comprehensive range of versions to meet the most diverse market's needs, this tractor series combines a high level of performance, safety and reliability with an ergonomic design that enhances operator comfort. Like previous models, the 9600 tractors feature an electronically-controlled reverse shuttle that makes them unique in their segment. The two 3.3L turbo intercooler Cummins engines, currently used in Italy only by Valpadana, are environment-friendly and provide improved performance and fuel economy while reducing exhaust emissions.

The 9600 range is the result of our ongoing commitment to meet the ever-changing needs of our end users; a commitment which reflects the **ORIGINAL PASSION** that guides the Valpadana's team in its daily work ... come share in our passion!

9600 Series: power... applied
